Even though there has been a significant outcry against animal testing, nearly “400,000 animals are still being used annually in . . . the EU” (Taylor 89).

“Instead of expecting perfection from” the test results, we must seek to corroborate their efficacy while pondering the “ethical cost of animal testing--the suffering, pain and death involved for millions of animals every year--and the human ethical cost of developing toxic and harmful medicines” (Bailey 5).

Because of the estrogenic nature of the compounds, BPAF and “BPA and may be affecting an environmental contribution of the increased incidence of endometriosis” (Jones 1).
